

MC4266 – Full Stack Web Development

Ex : 7

Ex:7 Create a Counter App using React JS

Ex:7 Create a Counter App using React JS

1. Create a React App - Directory

```
npx create-react-app ex7-app
```

// no Capital letters on name

```
cd ex7-app
```

2. Create the Counter Component

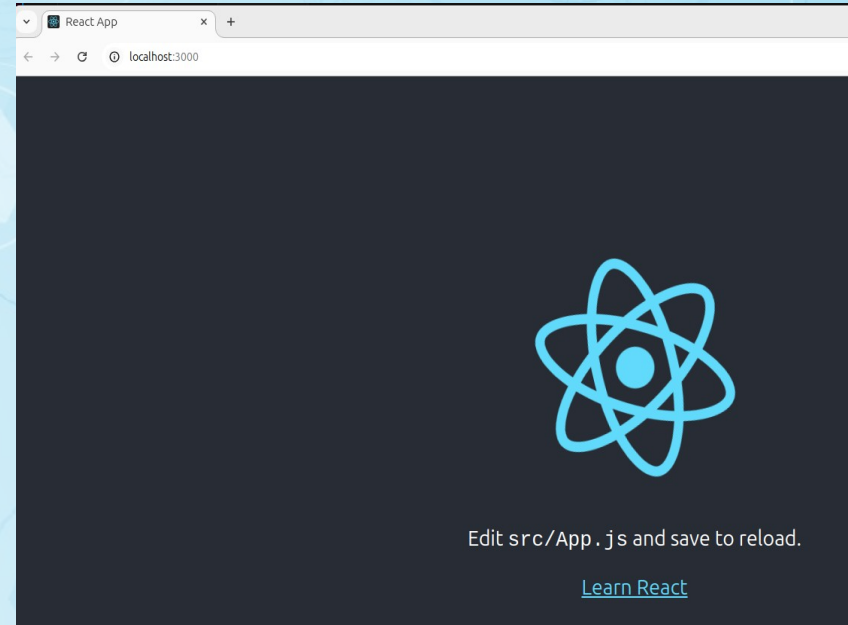

```
counter.js
```

3. Add Counter Component to App

```
src/App.js
```

4. Start the React JS

```
npm start
```

Ex : 8

Ex:8 Create a To-Do App using React JS

Ex:8 Create a to-do App using React JS

1. Create a React App - Directory

```
npx create-react-app ex8-app // no Capital letters on name  
// npx-Runs packages directly without installing them permanently.  
cd ex8-app
```

8 vulnerabilities (2 moderate, 6 high)

To address all issues (including breaking changes), run:

```
npm audit fix --force
```

Run `npm audit` for details.

Ex:8 Create a to-do App using React JS

1. Create a React App - Directory

`npx create-react-app ex-8-app` // no Capital letters on name
// npx-Runs packages directly without installing them permanently.

`cd ex-8-app` *8 vulnerabilities (2 moderate, 6 high)*
To address all issues (including breaking changes), run:
`npm audit fix --force`
Run ``npm audit`` for details.

2.Next, install React and ReactDOM:(optional)

`npm install react react-dom`

//React allows you to create reusable UI components

//ReactDOM is responsible for rendering those components in

Ex:8 Create a to-do App using React JS

3.Create the App Component – src/App.js

Use Code

4.Create the Component Style – src/App.css

Use Code

5.Create the TodoList Component – src/components/TodoList.jsx

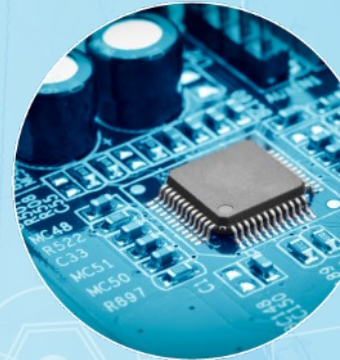

Use Code

6. Start server
